

PRESS RELEASE – 26 August 2015

Peregrine airspeed switch kits are now available through EDMO and Aircraft Spruce

Peregrine has increased the availability of their airspeed switch kits by offering the equipment for purchase through EDMO and Aircraft Spruce. These FAA PMA-approved kits enable installers to complete installation of STC-approved ADS-B Out systems utilizing the Trig Avionics and BendixKing Transponders.

The airspeed switch allows for a reliable and robust means of assuring proper ADS-B Out system reporting of the aircraft flight status. When installed in accordance with the STC, the kit provides an approved method of achieving the automatic air-ground determination for those aircraft that are presently covered on one of Peregrine's extensive Part 23 Approved Model List STCs.

Peregrine provides advanced systems engineering services and integrated electronic solutions to the general aviation industry. For further information on Peregrine and their ADS-B STCs, visit www.peregrine.aero.
