Metrea is excited to announce the addition of Peregrine Avionics LLC, to be known as Metrea Aerospace Design.

Metrea Aerospace Design will work with Metrea's existing engineering capabilities and maintenance, repair and overhaul stations in Oklahoma and Tampa, enhancing Metrea's ability to design, develop and modify manned assets, improving "time-to-theatre" and the capacity to spirally develop new air assets. Metrea Aerospace Design's rich market exposure will also enhance Metrea's ability to anticipate, understand, and address unique opportunities and challenges affecting mission-partners.

"We are very excited to welcome Peregrine Avionics LLC into the Metrea team. With Metrea Aerospace Design we are now able to leverage the much-prized capability of an ODA (Organization Designation Authorization) which enables Metrea to self-certify our aircraft designs and modifications on behalf of the FAA, further deepening our stack in key mission areas across the air domain," said Jon 'Ty' Thomas, Head of Air & Space Group for Metrea.

"Peregrine is excited to be an integral part of the Metrea team. With the support of such an innovative and solution-focused organization, we look forward to growing our engineering capacity and expanding our ODA capabilities. Since our founding in 2009, it makes sense now more than ever for us to partner with a team that has the drive and focus to foster our commitment to inspiring design, efficient program management, and regulatory compliance. I am excited that we now provide a core competency to such an elite enterprise, while elevating our support to legacy customers that helped lay our foundation," said David Rankin, Head of Metrea Aerospace Design.

MASD will continue to be based in Denver, Colorado.

Metrea is the leading provider of effects-as-a-service to national security partners across multiple domains and over a dozen mission-centric solution areas, including airborne ISR, aerial refueling, electronic warfare, communications, space-based ISR and advanced simulation.

Metrea is headquartered in Washington, DC with facilities across the United States, the United Kingdom, the EU and the Far East.
